enjoyed the treatment."

Claire found that Frankie had misalignments of her cervical vertebrae, lumbar vertebrae and a tilted pelvis. "She worked her way down Frankie's spine, gently realigning the vertebrae and helping her spine return to its full range of movement," explains Emma.

Further to her first McTimoney treatment, Emma was able to reduce Frankie's pain relief and, following two subsequent treatments, Frankie is no longer on any medication. Emma adds: "It is great that Frankie's standard of life is so improved. She is

#### **WHAT IS MCTIMONEY?**

The McTimoney chiropractic technique works by adjusting the bones of your pet's body to improve the alignment of the skeleton, and help the nervous system to work more efficiently. The treatment aims to realign the body, relieving pain and discomfort, and increasing mobility.

To find a McTimoney chiropractor, ask your vet for a referral or visit the McTimoney Chiropractic Association website at [www.mctimoneychiropractic.org](http://www.mctimoneychiropractic.org) or tel. 01491 829211.

back to her normal self and is so much more active and friendly. She has also started sitting in front of me and lifting a paw to tap me, which she has never done before!" ■■
